Market Environment

Global Equity Markets

- § The "reflation trade" that drove global equity markets higher last quarter was bolstered in Q1 by a continuation of improving economic fundamentals across regions. Global equities (measured by the MSCI All Country World Index) returned 5.8% in local currency terms. Momentum in equity markets, however, waned towards the end of the quarter as the US administration's struggles to revise healthcare reform led to more realistic expectations for pro-growth policies.
- § All regions generated positive returns with Emerging Markets being the strongest performing region, rebounding from underperformance late in 2016. Despite an uncertain outlook for the region given the protectionist stance from the US administration, strong capital inflows and improving macroeconomic fundamentals led EM equities higher. A weaker US dollar tone also acted as a tailwind for the region.

U.S. Equity Markets

RUSSELL STYLE RETURNS
AS OF 03/31/2017

Source: Russell Indexes

RUSSELL GICS SECTOR RETURNS
AS OF 03/31/2017

Source: Russell Indexes

- § The Russell 3000 Index returned 5.74% during the first quarter and returned 18.07% over the one-year period.
- § During the first quarter and over the one-year period, the technology sector was the strongest performer, posting returns of 12.71% and 27.21% respectively. The energy sector was the weakest performer and the only sector which posted negative returns in Q1 2017; falling 6.77%.
- § Performance across the market capitalization spectrum was mostly positive over the quarter. Small cap stocks, across both Value and Growth equity styles, underperformed relative to their large and mid-cap peers. Across all capitalizations, Growth stocks outperformed Value stocks over the first quarter of 2017.

U.S. Fixed Income Markets

BLOOMBERG BARCLAYS AGGREGATE RETURNS BY MATURITY AS OF 3/31/2017

Source: Barclays Live

BLOOMBERG BARCLAYS AGGREGATE RETURNS BY QUALITY AND HIGH YIELD RETURNS AS OF 3/31/2017

Source: Barclays Live

AS OF 3/31/2017

Source: Barclays Live

§ The Bloomberg Barclays Aggregate Bond returned 0.82% in the first quarter of 2017. Corporate bonds returned the most at 1.22% while Mortgage Backed Securities returned the least at only 0.47%.

§ High yield bonds outperformed investment grade corporate bonds across different credit qualities, as High Yield bond spreads fell by 26 basis points whilst changes in investment grade corporate bond spreads were more muted.

§ Longest duration bonds outperformed all bonds of lower maturities, as the yield curve flattened over the quarter.

U.S. Fixed Income Markets

U.S. TREASURY YIELD CURVE

U.S. 10-YEAR TREASURY AND TIPS YIELDS

- § The Treasury yield curve flattened over the quarter, as yields of short maturity bonds rose while yields at longer maturities fell.
- § The 10-year U.S. Treasury yield ended the quarter at 2.40%, 5 basis points lower than the level at the beginning of the quarter.
- § The 10-year TIPS yield fell by 7 basis points over the quarter and ended the period at 0.43%.

European Fixed Income Markets

- § European bond yields trended higher with other developed government bond yields in early 2017. Elevated political risk and expectations that the ECB may start tightening monetary policy offset the downward pressure on yields from a slowing reflation trade later in the quarter.
- § Within the Eurozone, bond spreads relative to German Bunds were mostly unchanged over the quarter. This was despite increased uncertainty in the region caused by the surge in popularity of anti-euro political parties. The exception to this were Greek government bond spreads which after rising initially in 2017, moved lower by c.20 basis points following more productive bailout talks.
- § The European Central Bank (ECB) raised the region's inflation and growth forecasts with market participants increasingly speculating that the ECB may start tightening its very accommodative set of monetary policies in the near future.

Credit Spreads

Spread (bps)	03/31/2017	12/31/2016	03/31/2016	Quarterly Change (bps)	1-Year Change (bps)
U.S. Aggregate	44	43	56	1	-12
Long Gov't	3	3	4	0	-1
Long Credit	168	167	223	1	-55
Long Gov't/Credit	101	104	136	-3	-35
MBS	27	15	22	12	5
CMBS	77	75	109	2	-32
ABS	54	59	74	-5	-20
Corporate	118	123	163	-5	-45
High Yield	383	409	656	-26	-273
Global Emerging Markets	257	288	382	-31	-125

- § During the first quarter of 2017, movement in credit spreads were mixed across different areas of the bond market.
- § Spreads on lower quality credit such as High Yield and Global Emerging Markets fell the most over the first few months; falling by 26 and 31 basis points respectively. Spreads on Mortgage Backed Securities (MBS) (12 basis points) rose by the most over the quarter, followed by CMBS bonds (2 basis points). Long Government and Credit spreads were relatively unchanged over this period.

Commodities

COMMODITY RETURNS
AS OF 03/31/2017

Source: Dow Jones-UBS

- § The Bloomberg Commodity Index fell during the first quarter returning -2.33%.
- § Over the quarter, the best performing segment was Precious metals with a return 9.77%, followed by the Industrial metals sector (7.62%).
- § Energy was the worst performing sector during the quarter with a return of -11.41%, as the price of Brent crude oil slipped to under \$54/bbl.

(1997 = 100)

Source: Federal Reserve

U.S. DOLLAR RELATIVE TO EUR, GBP AND JPY
REBASED TO 100 AT 03/31/2012

Source: DataStream

- § After reaching new heights in early 2017 the U.S. dollar fell sharply over the quarter, as measured through the broad trade weighted U.S. dollar index.
- § The US dollar depreciated against all the major currencies despite the Fed hiking the target range for the federal funds rate to 0.75%-1.00%, a continuation of the divergent interest rate paths of the US and other developed markets. Lower uncertainty following the UK Prime Minister's comments indicating a "hard" Brexit stance alongside a slowing of the reflation trade, led to the pound strengthening by 1.2% against the US dollar.
- § Yen appreciation this quarter was a partial correction of the substantial weakening that occurred in the last few months of 2016. The yen rose sharply by 4.7% against the US dollar to March 2017.

Hedge Fund Markets Overview

HEDGE FUND PERFORMANCE
AS OF 03/31/2017

Note: Latest 5 months of HFR data are estimated by HFR and may change in the future.
Source: HFR

- § Hedge fund performance was positive across all strategies with the exception of Global Macro.
- § The HFRI Fund-Weighted Composite Index and the HFRI Fund of Funds Composite Index produced returns of 2.39% and 2.33% respectively, during the quarter.
- § Emerging Markets was the best performer, with a return of 6.09% in the first quarter.

U.S. Commercial Real Estate Markets

PRIVATE VS. PUBLIC REAL ESTATE RETURNS
AS OF 03/31/2017

*First quarter returns are preliminary
Sources: NCREIF, NAREIT

RETURN INDEX CPPI BY PROPERTY SECTOR
SOURCE: MOODYS/RCA, AON HEWITT 12/31/2016

- § Returns moderated throughout 2016 and this trend continued in the first quarter of 2017 with U.S. Core real estate returns generating 1.77%*, which is 34 bps lower than the fourth quarter of 2016 and down 41 bps year-over-year (“YOY”). Income (1.06%) continued to outpace appreciation (0.70%) and as asset appreciation abates, investment returns are likely to continue to moderate toward the long-run average. At this mature point in cycle, income growth will likely to be larger driver of appreciation than yield compression.
- § Following gains of 7.6% in 2016, U.S. REITs were slightly positive in the first quarter, generating 0.2% (FTSE NAREIT Equity REIT Index), although fell almost 3% in March as growth expectations for the sector faded over the year. Overall, operating fundamentals still remain favorable, although the pace of cash flow (net operating income “NOI”) growth has decelerated. U.S. REITs ended the quarter trading at slight premiums to NAVs, although this was largely driven by REIT sectors, such as health care and net lease, providing higher dividends. Excluding these two sectors, REITs trade at a 5% discount.
- § U.S. property sales continued to decline in the first quarter, with preliminary data showing a 31% drop in transaction volume from the previous year. Property sales have weakened over the past few quarters due to fewer mega-deals, but this most recent decline is due to a 27% YOY drop in single asset sales. The drop in property sales is predominately due to a rising rate environment, buyers concerns surrounding cap rate movements and a disconnect between buyers and sellers. Despite the drop in property sales, pricing is still relatively tight with cap rates at similar levels to Q1 2016.
- § The uncertain economic and policy environment also means an uncertain outlook for fundamentals. It is forecasted that supply and demand will be largely in balance, as steady demand is met by constrained new construction due to changes in bank regulations, especially reserve requirements on construction loans. However, the Apartment and Industrial sector are further along in the new construction phase of their respective cycles which comes with greater risk of increases in vacancy and lower rent growth rates.
- § The U.S. real estate cycle is mature, and thus more susceptible to bumps along the road. While still solid income returns are forecast to continue to support attractive relative returns versus many other asset classes, portfolio construction consideration is critical. At this point in the cycle, appropriate risk mitigation measures should be a staple in all investment portfolios as new investments will likely be required to ride out a cyclical downturn.

Private Equity Market Overview - Fourth Quarter 2016

- § **Fundraising:** In 4Q 2016, \$162.0 billion was raised by 302 funds, which was up 42.4% on a capital basis and 15.7% by number of deals from the prior quarter. On an annual basis, private equity fundraising totaled \$527.3 billion, which was up 12.5% year over year ¹. Dry powder stood at \$1.2 trillion at the end of 2016, up 7.3% and 26.0% compared to 2015 and the five year average, respectively ¹.
- § **Buyout:** Global private equity-backed buyout deals totaled \$339.3 billion in 2016, which was down 19.8% from the prior year, but above the five year average of \$331.4 billion ¹. At the end of 2016, the average purchase price multiple for all U.S. LBOs was 10.0x EBITDA, down from 10.3x as of the end of 2015. Both large cap and middle-market purchase price multiples decreased year over year. Middle-market purchase price multiples decreased from 10.7x in 2015 to 10.2x in 2016 ². The weighted average purchase price multiple across all European transaction sizes averaged 10.3x EBITDA through year end 2016. Purchase prices for transactions of €1.0 billion or more increased from 10.4x in 2015 to 11.4x in 2016. Transactions between €500.0 million and €1.0 billion were up 0.3x year over year, and stood at 10.5x ². Globally, exit value totaled \$337.9 billion on 1,805 deals in 2016, down 23.2% and 8.7%, respectively, from 2015 ¹.
- § **Venture:** During the fourth quarter, 982 venture backed transactions totaling \$11.7 billion were completed, marking a two-year low as measured by both deals and capital. On a full year basis, \$58.6 billion of capital was deployed across 4,520 deals, compared to \$73.3 billion across 5,406 deals in 2015 ³. Total U.S. venture backed exit activity totaled \$46.8 billion across 726 completed transactions in 2016, down from \$50.0 billion in 2015. 2016 median U.S. exit value stood at \$84.5 million compared to \$65.0 million in full year 2015 ⁴.
- § **Mezzanine:** 15 funds closed on \$23.2 billion during the quarter, up from 3Q 2016's total of \$4.9 billion raised by 17 funds. 4Q 2016 capital raised was more than the aggregate total of the prior six quarters (\$18.1 billion). Estimated dry powder was \$51.7 billion at the end of 4Q 2016, up 2.0% from 3Q 2016 ¹. Fundraising remains competitive with an estimated 74 funds in market targeting \$20.5 billion of commitments in addition to continued market participation from private lending platforms and business development companies (BDCs) ¹.
- § **Distressed Debt:** U.S. high-yield defaults totaled approximately \$60.0 billion in 2016, which was significantly above 2015's full year total of \$48.3 billion. The LTM U.S. high-yield default rate was 4.7% as of December 2016, which was down from August 2016's LTM rate of 4.9% ⁵. Default rates are expected to decline due to the stabilization of crude oil prices and improved conditions in the high yield market ⁵. Distressed debt and bankruptcy restructuring activity totaled \$346.5 billion in 2016, up 121.4% year over year. U.S. activity accounted for \$183.9 billion in 2016 and was more than triple the total over 2015⁶.
- § **Secondaries:** Eight funds raised \$5.8 billion during the fourth quarter, up from \$3.3 billion by nine funds in 3Q 2016. On a full year basis, secondary capital raised totaled \$28.8 billion, up from 2015 (\$20.4 billion) and the five year annual average (\$21.0 billion) ¹. The average discount rate for all private equity sectors remained unchanged at 8.5% on both quarter over quarter and year over year bases and remains very favorable for potential sellers ⁷.
- § **Infrastructure:** \$13.2 billion of capital was raised by 21 funds in 4Q 2016 compared to \$26.4 billion of capital closed on by 25 partnerships in 3Q 2016. On an annual basis, \$63.0 billion was raised by 65 funds, up from \$44.3 billion by 72 partnerships in 2015. At the end of the year, dry powder stood at \$137.0 billion, down slightly from 2Q's record total of \$142.0 billion, but up from 2015's year end level of \$109.0 billion ¹. Infrastructure managers completed 2,148 deals with an estimated aggregate deal value of \$744.0 billion in 2016 compared to 2,034 deals totaling \$622.7 billion a year ago ¹.
- § **Natural Resources:** During 2016, 41 funds closed on \$24.0 billion compared to 39 funds totaling \$40.9 billion in 2015. Energy and utilities industry managers completed an estimated 218 deals totaling a reported \$21.1 billion in 2016, representing 88.6% of 2015's full year deal value ¹.

Data Sources and Methodology

Performance Return Calculations

Returns calculated in the performance summary tables are time-weighted rates of return (TWRR). TWRR are calculated from the changes in monthly market values, adjusted for weighted cash flows between months. Returns are linked geometrically and annualized for period longer than one year.

Data Source

Aon Hewitt Investment Consulting, Inc. (AHIC) is an independent third party consulting firm and calculates returns from best source book of record data. Returns calculated by AHIC may deviate from those shown by the manager in part, but not limited to, differences in prices and market values reported by the custodian and manager. It is the responsibility of the manager and custodian to provide insight into the pricing and methodologies and any difference in valuation.

Illiquid Alternatives

Closed end funds including but not limited to Real Estate, Hedge Funds, Private Equity, and Private Credit may lag performance and market value data due to delayed reporting. AHIC will show market values for closed end funds as of the most recent reported performance adjusted for capital calls and distributions. Closed end fund managers report performance using an internal rate of return (IRR), which differs from the TWRR calculation done by AHIC. It is inappropriate to compare IRR and TWRR to each other. IRR figures reported in the illiquid alternative pages are provided by the respective managers, and AHIC has not made any attempts to verify these returns. Until a partnership is liquidated (typically over 10-12 years), the IRR is only an interim estimated return. The actual IRR performance of any LP is not known until the final liquidation.

Manager Benchmark Descriptions

MSCI AC World IMI (Net): A capitalization-weighted stock index that captures large, mid and small cap representation across 23 Developed Markets (DM) and 23 Emerging Markets (EM) countries. With 8,721 constituents, the index is comprehensive, covering approximately 99% of the global equity investment opportunity set.

MSCI USA IMI (Net): A capitalization-weighted stock index designed to measure the performance of the large, mid and small cap segments of the US market. With 2,494 constituents, the index covers approximately 99% of the free float-adjusted market capitalization in the US.

BofA Merrill Lynch All U.S. Convertibles: The index consists of convertible bonds traded in the U.S. dollar denominated investment grade and non-investment grade convertible securities sold into the U.S. market and publicly traded in the United States. The Index constituents are market value weighted based on the convertible securities prices and outstanding shares.

S&P 500 Index: A capitalization-weighted stock index consisting of 500 of the largest publicly traded U.S. stocks by capitalization.

Russell 2000 Index: A capitalization-weighted stock index that measures the performance of approximately 2000 small capitalization U.S. stocks.

MSCI AC World ex USA Index (Net): A capitalization-weighted index that captures large and mid-cap representation across 22 of 23 Developed Markets (DM) countries (excluding the US) and 23 Emerging Markets (EM) countries. With 1,859 constituents, the index covers approximately 85% of the global equity opportunity set outside the US.

MSCI EAFE IMI (Net): A capitalization-weighted index of stocks that captures large, mid and small cap representation across Developed Markets countries around the world, excluding the US and Canada. With 3,170 constituents, the index is comprehensive, covering approximately 99% of the free float-adjusted market capitalization in each country.

MSCI EAFE Index (Net): A capitalization-weighted index of stocks that captures large and mid-cap representation across Developed Markets countries around the world, excluding the US and Canada. With 930 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI Emerging Markets IMI (Net): A capitalization-weighted index of stocks that captures large, mid and small cap representation across 23 Emerging Markets (EM) countries. With 2,743 constituents, the index covers approximately 99% of the free float-adjusted market capitalization in each country.

MSCI Emerging Markets Index (Net): A capitalization-weighted index of stocks that captures large and mid-cap representation across 23 Emerging Markets (EM) countries. With 836 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

Bloomberg Barclays U.S. Intermediate Aggregate: A market value-weighted index consisting of U.S. Treasury securities, corporate bonds and mortgage-related and asset-backed

Benchmark and Universe Descriptions

securities with one to ten years to maturity and an outstanding par value of \$250 million or greater.

Bloomberg Barclays Aggregate Index: A market value-weighted index consisting of government bonds, SEC-registered corporate bonds and mortgage-related and asset-backed securities with at least one year to maturity and an outstanding par value of \$250 million or greater. This index is a broad measure of the performance of the investment grade U.S. fixed income market.

Bloomberg Barclays U.S. Treasury: 7-10 Year: A market value-weighted index consisting of U.S. Treasury bonds with seven to ten years to maturity and an outstanding par value of \$250 million or greater.

Bloomberg Barclays Long Government Index: An unmanaged index considered representative of long-term fixed-income obligations issued by the U.S. treasury, government agencies and quasi-federal corporations.

Bloomberg Barclays Intermediate Government Index: An unmanaged index considered representative of intermediate-term fixed-income obligations issued by the U.S. treasury, government agencies and quasi-federal corporations.

BofA ML US High Yield Master II Constrained: A market capitalization-weighted index that tracks the performance of U.S. dollar-denominated, below investment grade corporate debt publicly issued in the U.S. domestic market.

Citi 3-Month T-bill: An index that measures the average return of the last three-month U.S. Treasury Bill issues.

HFRI Macro (Total) Index: Tracks investment managers which trade a broad range of strategies in which the investment process is predicated on movements in underlying economic variables and the impact these have on equity, fixed income, hard currency and commodity markets. Managers employ a variety of techniques, both discretionary and systematic analysis, combinations of top down and bottom up theses, quantitative and fundamental approaches and long and short term holding periods. Although some strategies employ RV techniques, Macro strategies are distinct from RV strategies in that the primary investment thesis is predicated on predicted or future movements in the underlying instruments, rather than realization of a valuation discrepancy between securities. In a similar way, while both Macro and equity hedge managers may hold equity securities, the overriding investment thesis is predicated on the impact movements in underlying macroeconomic variables may have on security prices, as opposed to EH, in which the fundamental characteristics on the company are the most significant are integral to investment thesis.

NCREIF ODCE (Net) Monthlized: A capitalization weighted index comprised of open-end, Core funds investing in commercial real estate properties. The funds that constitute the index are subject to certain geographic and property type diversification requirements as well as leverage restrictions. The index reflects the impact of leverage on investment results. The returns shown in this report are net of management fees of the respective funds included in the index.

Glossary

Allocation Effect: An attribution effect that describes the amount attributable to the managers' asset allocation decisions, relative to the benchmark.

Alpha: The excess return of a portfolio after adjusting for market risk. This excess return is attributable to the selection skill of the portfolio manager. Alpha is calculated as: $\text{Portfolio Return} - [\text{Risk-free Rate} + \text{Portfolio Beta} \times (\text{Market Return} - \text{Risk-free Rate})]$.

Benchmark R-squared: Measures how well the Benchmark return series fits the manager's return series. The higher the Benchmark R-squared, the more appropriate the benchmark is for the manager.

Beta: A measure of systematic, or market risk; the part of risk in a portfolio or security that is attributable to general market movements. Beta is calculated by dividing the covariance of a security by the variance of the market.

Book-to-Market: The ratio of book value per share to market price per share. Growth managers typically have low book-to-market ratios while value managers typically have high book-to-market ratios.

Capture Ratio: A statistical measure of an investment manager's overall performance in up or down markets. The capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen (up market) or fallen (down market). The capture ratio is calculated by dividing the manager's returns by the returns of the index during the up/down market, and multiplying that factor by 100.

Correlation: A measure of the relative movement of returns of one security or asset class relative to another over time. A correlation of 1 means the returns of two securities move in lock step, a correlation of -1 means the returns of two securities move in the exact opposite direction over time. Correlation is used as a measure to help maximize the benefits of diversification when constructing an investment portfolio.

Excess Return: A measure of the difference in appreciation or depreciation in the price of an investment compared to its benchmark, over a given time period. This is usually expressed as a percentage and may be annualized over a number of years or represent a single period.

Information Ratio: A measure of a manager's ability to earn excess return without incurring additional risk. Information ratio is calculated as: excess return divided by tracking error.

Interaction Effect: An attribution effect that describes the portion of active management that is contributable to the cross interaction between the allocation and selection effect. This can also be explained as an effect that cannot be easily traced to a source.

Portfolio Turnover: The percentage of a portfolio that is sold and replaced (turned over) during a given time period. Low portfolio turnover is indicative of a buy and hold strategy while high portfolio turnover implies a more active form of management.

Price-to-Earnings Ratio (P/E): Also called the earnings multiplier, it is calculated by dividing the price of a company's stock into earnings per share. Growth managers typically hold stocks with high price-to-earnings ratios whereas value managers hold stocks with low price-to-earnings ratios.

R-Squared: Also called the coefficient of determination, it measures the amount of variation in one variable explained by variations in another, i.e., the goodness of fit to a benchmark. In the case of investments, the term is used to explain the amount of variation in a security or portfolio explained by movements in the market or the portfolio's benchmark.

Selection Effect: An attribution effect that describes the amount attributable to the managers' stock selection decisions, relative to the benchmark.

Glossary

Sharpe Ratio: A measure of portfolio efficiency. The Sharpe Ratio indicates excess portfolio return for each unit of risk associated with achieving the excess return. The higher the Sharpe Ratio, the more efficient the portfolio. Sharpe ratio is calculated as: $\text{Portfolio Excess Return} / \text{Portfolio Standard Deviation}$.

Sortino Ratio: Measures the risk-adjusted return of an investment, portfolio, or strategy. It is a modification of the Sharpe Ratio, but penalizes only those returns falling below a specified benchmark. The Sortino Ratio uses downside deviation in the denominator rather than standard deviation, like the Sharpe Ratio.

Standard Deviation: A measure of volatility, or risk, inherent in a security or portfolio. The standard deviation of a series is a measure of the extent to which observations in the series differ from the arithmetic mean of the series. For example, if a security has an average annual rate of return of 10% and a standard deviation of 5%, then two-thirds of the time, one would expect to receive an annual rate of return between 5% and 15%.

Style Analysis: A return based analysis designed to identify combinations of passive investments to closely replicate the performance of funds

Style Map: A specialized form or scatter plot chart typically used to show where a Manager lies in relation to a set of style indices on a two-dimensional plane. This is simply a way of viewing the asset loadings in a different context. The coordinates are calculated by rescaling the asset loadings to range from -1 to 1 on each axis and are dependent on the Style Indices comprising the Map.
